

This web page would be useful for people with businesses where it is necessary to have a count and a record of the products that are in the store.

With this website, you can register new products, putting "name", "price", "quantity". In this way it will be saved in the database.

Once the products are registered, we have the part where the list of all the products found in the database is shown.

In this list we have the products divided, in each product we have the option to edit the data or eliminate it from the database.

The view of the products could be improved, when several are added, you need to lower the screen to see the products, a bar could be added to the products box.

It would also be necessary to improve, when there is an error that the alert appears in a beautiful way.

Here we see how we add our first product with its three fields.
